# WATER PROOFING KIT

WK-1-KP

The WK-1-KP is provided to encase the Impulse suppressor and its connectors to prevent moisture penetration. The weather proofing material is a nonconductive, black, tacky, mastic, petroleum-based product that does not harden or crack and is reusable. It will withstand temperatures from -65 degrees to +180 degrees F. Its surface may be painted with either water-based latex or solvent-based paints. It is water impermeable (MIL-S-19653A) and its U.V. and salt spray resistance are exceptional. It is non-irritating to the skin and is hand applied.

The WK-1-KP contains one roll of tape, and one piece of weather proofing material measuring 2.5 x 6 x 1/8 inches that can be cut to smaller usable dimensions.

When applying the WK-1-KP, use one layer of tape to insulate the connectors from the weather proofing material. All exposed surfaces should be covered; especially the coax connections and the ground interface. Coat the taped area and exposed surfaces with the weather proofing material and finish with a second layer of tape.

The WK-1-KP may also be used to seal cable entrances if gaps are minimal.

WARNING- **Do not connect** during a storm! **Do not connect** when transmissions are occurring! **Do not stay** in an area that has operating equipment in an electrical storm!
